

## Email template for patient organisations to use

The Rare Barometer survey results are available!

Following months of analysis, the Rare Barometer found that :

- It takes 4.7 years for rare diseases to be diagnosed
- 60% of people living with a rare disease have been misdiagnosed

[Here you can find a factsheet](#) summarising the key findings of the survey. For those of you who want to know more, you can [read the full article here](#) in English, or [access here the global dashboard](#) with the European results displayed in charts and tables for each question of the survey.

These results will be used by advocates of people living with a rare disease.

In the meantime, please continue to spread the word about Rare Barometer by sharing this link: <https://www.eurordis.org/rare-barometer/>

Please use the Rare Barometer logo alongside articles promoting the survey results on your website.
